For Dentists By Dentists

MEDIT

Introduction

the *i500* intraoral scanner, exemplifies three qualities:
Value, Efficiency, and Productivity

Together, these three qualities make it easy to incorporate our scanner into your workflow. Designed with quality in mind, we created the *i500* to add value to your practice.

With its impressive speed and powderless system, the *i500* allows for a smoother scanning experience, shortening turnaround times and increasing the productivity of your clinic.

Regardless of your specialization, the *i500* has diverse applications, ensuring that your professional needs are met. Increase your work efficiency with the vast flexibility that the open CAD/CAM system offers and never worry about compatibility issues again.

Make the transition today and enjoy the Medit experience.

Why i500

High ROI

We created the *i500* scanner with a high Return On Investment in mind. The design and software allow for an unparalleled performance at a very competitive price.

Flexibility

The *i500* uses an open CAD/CAM system, allowing you to export STL files out of Medit Link and share it with your preferred lab, or to easily transfer files and track your progress throughout the entire workflow.

Impressive speed

Using two high-speed cameras, the *i500* scans quickly and efficiently. With its intelligent scan detecting algorithm, the *i500* picks up where it left off for a smooth scanning experience.

Powderless

The *i500* does not require the use of powder for regular cases, making the scanning process more seamless and the experience more pleasant for the patient.

Small tip

The small tip on the *i500* is beneficial to both the user and the patient through simpler maneuverability and improved patient comfort.

High resolution

The *i500* produces realistic images which are high in resolution and rich in detail, allowing you to distinguish between tooth structure and soft tissue for easy identification of margin lines and undercuts.

Accuracy

Single Crown : Trueness (Accuracy) = 4.2 μm ($\pm 0.49 \mu\text{m}$)

Precision (Consistency) = 2.1 μm ($\pm 0.58 \mu\text{m}$)

*Single crown accuracy test was conducted by Medit according to the methods in "Evaluation of the Accuracy of Six Intraoral Scanning Devices: An in-vitro Investigation. ADA Professional Product Review 2015".

Quadrants : $\pm 50 \mu\text{m}$ / Full Arch : $\pm 100 \mu\text{m}$

*The reference model for Quadrants and Full Arch accuracy was scanned with an industrial grade, highly accurate reference scanner Solutionix D700 (6.4 megapixel, Advanced Blue Light Technology for small object scanning).

Video type

There is no need to worry about choppy results with the *i500* as it takes rapid video-based scans, capturing more data in a short period of time. The resulting image taken by the dual cameras is hence smoother and more detailed.

Lightweight

Scanning can be uncomfortable and tiring, especially if you're using a heavy scanner. But we have eliminated that problem with the *i500* scanner which is light in weight and easy to hold, making the process a comfortable one for you.

Vivid color

The *i500* scanner produces precise-colored scans which can distinguish between soft tissue, plaque and teeth.

Single button control

The single button of the *i500* allows the user to start and stop the scan at any moment without having to reach for the computer. Press the button down once to start scanning, and another time to stop. When the scan is complete, hold it down to move to the next scanning stage.

i500 (Intra oral scanner)

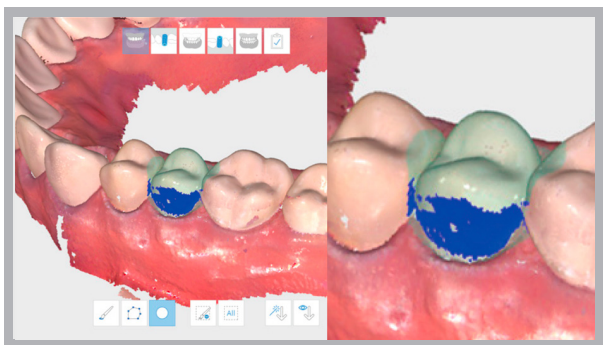

Perfect Software and Hardware Combination

Using the i500 and its accompanying software is a pleasant experience. It is easy to understand for all users, and it is simple to incorporate the system into your practice or lab.

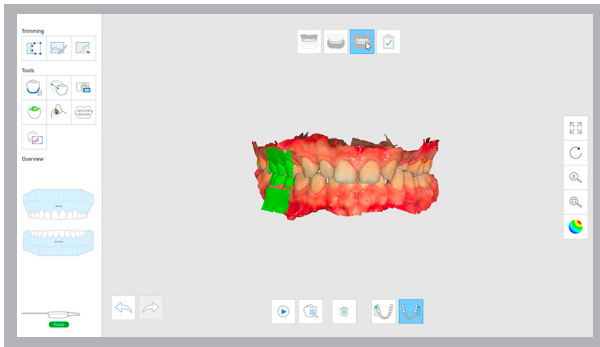

User-friendly UI

Our software user interface is intuitive with a streamlined process so you can spend less time on scanning and more time on diagnosing and treating your patient.

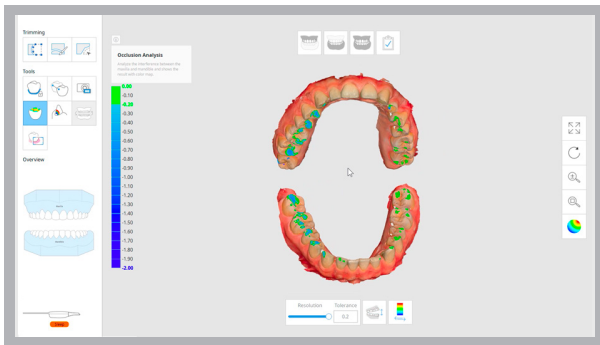

Undercut Area Analysis

This feature allows you to analyze the undercut area based on insertion direction. You can set the insertion direction via two methods (auto or manual direction).

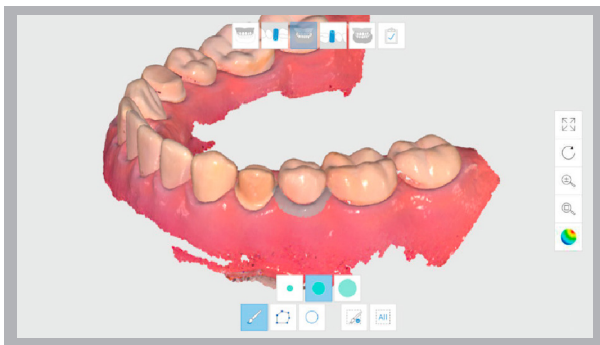

Automatic Alignment

The i500 scan software automatically finds the occlusion with a simple scan of the bite.

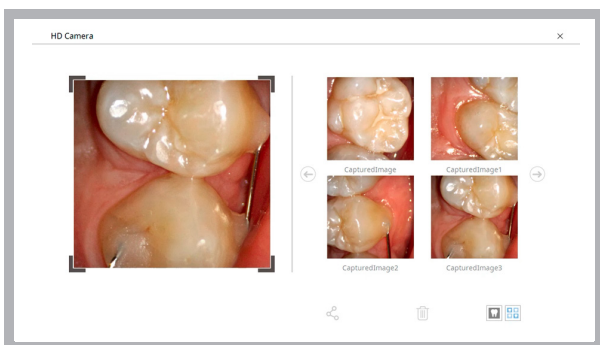

Occlusion Analysis

This feature displays any interference between the maxilla and mandible on an easy-to-read color map.

Lock Area

You can lock the scan area by painting it and locked (colored) area will not be updated by further scanning. Use this feature to fix retracted gingiva after immediate scanning as it might collapse. You can still trim the locked surface. Deleted locked surface can be re-scanned.

HD Camera

It is easy to take 2D images with 3D model data and share them with a laboratory.

Medit Link

Medit's new workflow management and communication software, Medit Link, is developed to enhance your performance. Its integrated cloud storage and open data architecture ensure that your clinic's performance is optimized. However, everyday CAD processes with real-time workflow management and communication tools will also work.

Cloud Storage

Medit Link is coupled with cloud storage for all digital scan files. Digital copies require less space than physical copies, and with our cloud system, you can easily archive your digital impressions and orders and manage cases wherever you are.

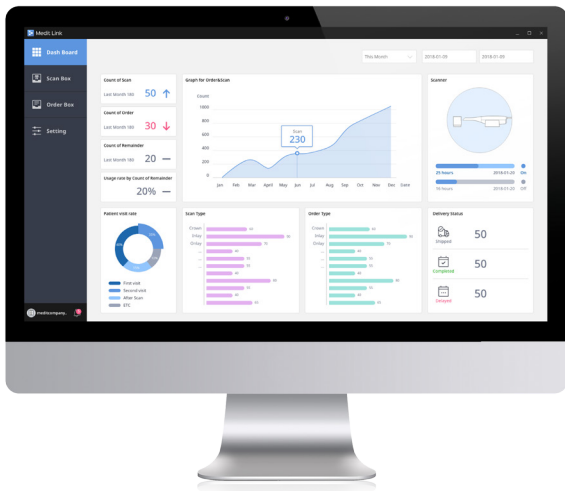

Easy Communication Coming Soon

By integrating direct communication options, you can ask your customers questions quickly to ensure the highest-quality outcomes. This will not only increase the quality of your end-product, but will also save you money and improve your customers' satisfaction in the long run.

3D Viewer

After completing the scanning process in the i500 scan software, you can preview the final data via the 3D viewer in Medit Link.

Dashboard Coming Soon

Medit Link's user-friendly, effective dashboards allow access to a summarized form of all your data at a glance. Keep track of all your order information including relevant costs, scan types and patient visit rates, enabling you to manage your performance and communicate effectively with your partners easily.

Workflow Management Coming Soon

Medit Link allows tracking of workflows from order to delivery, and can even be linked to CAD/CAM software to improve work efficiency. Medit Link was created to help you manage your workflow in the easiest and most effective way possible, saving you valuable time.

Payment Management

With Medit Link's payment management system, you no longer need to worry about forgetting a payment. Let the system handle the administrative tasks so you can focus on being more productive.

THE EASY ENTRY INTO **DIGITAL DENTISTRY**

Specification

Category	Description
Tip size	19 x 15.2 mm (WxH)
Overall handpiece length	266 mm
Weight	276g
Imaging technology	3D-in-motion video technology
Color	3D full color streaming capture
Connectivity	USB 3.0
Scanning area	14 x 13 mm
